President's Message

— by Bob Schaefer

The April 28 meeting was truly outstanding. Michael Dresdner put on a most informative question and answer program responding to numerous questions with wit, humor and, most importantly, great depth and breadth of knowledge of wood finishing. He also demonstrated many examples of different types of finishes on different woods plus additional items to illustrate the points he was making. A truly memorable presentation by a master in the field.

Short business notes. Three thousand dollars in the treasury and eighty eight paid members.

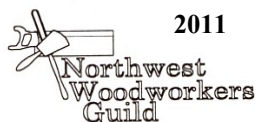

The next meeting is May 26 at 6:30 PM at Woodcraft Supply. The speaker will be John Shrader who will talk about doing metal inlay in wood. I have spoken with Mr. Shrader and visited his website (crestcreations.net) and I am sure this will also be a fine program. Be sure to check out the website.

Thanks again to Don McNutt and George Knutson for their able assistance, and to Ray Ross for bringing the goodies. And again much gratitude to Ron Hall for letting the Guild have its meetings in this great venue.

We will also have a Raffle and Show-and-tell at the next meeting! Be sure to bring your recent projects to share, and your \$\$ to purchase raffle tickets.

Seattle 98108
10% Discount (not valid on power tools or workbenches)

Edensaw Woods
8032 S. 194th St.
Kent, WA 98032

Please present your current membership card to receive your discount.

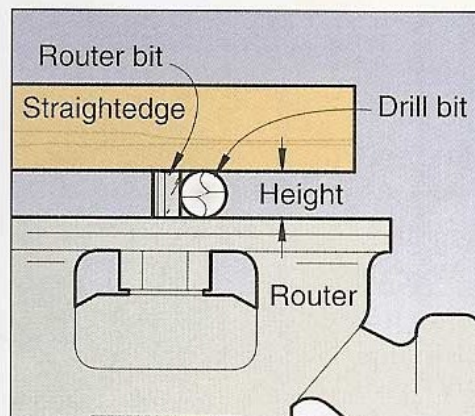

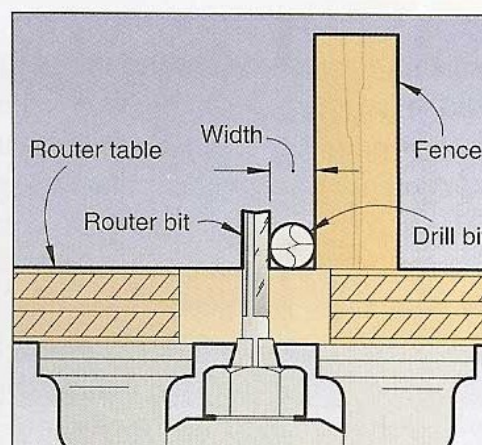

Shop Tip (submitted by Herb Stoops)

DRILL BITS PROVIDE GREAT MEASUREMENT

When setting the distance from a router bit to the fence on your router table, a drill bit often can provide you with a more accurate measurement than any ruler in your shop. For example, when you need a $\frac{1}{4}$ " space, simply hold the shank of a $\frac{1}{4}$ " twist-type drill bit against the router bit, as shown at *right*, and move the fence in until the drill bit fits snug against both surfaces.

Don't, however, push the fence in so tight that you can't remove the drill bit. Rather, adjust the fence until the drill bit drags lightly on both the router bit and the fence when you withdraw it (much like using a spark-plug feeler gauge).

You also can employ this technique for setting the height of a router bit. Place a straightedge across the top of the bit, as shown at *right*, and adjust the height of the router bit until the drill bit fits snugly between the router base or tabletop and the straightedge.

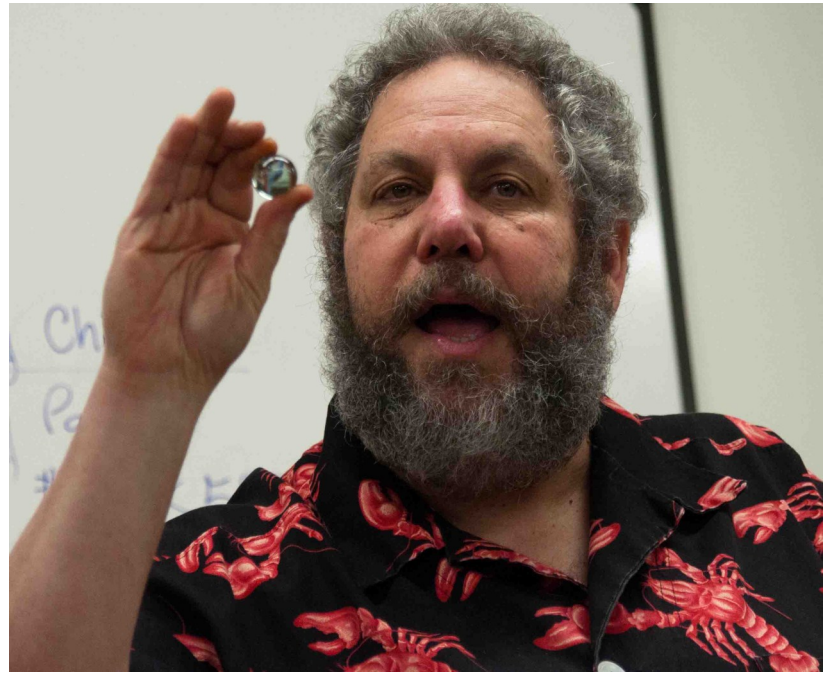

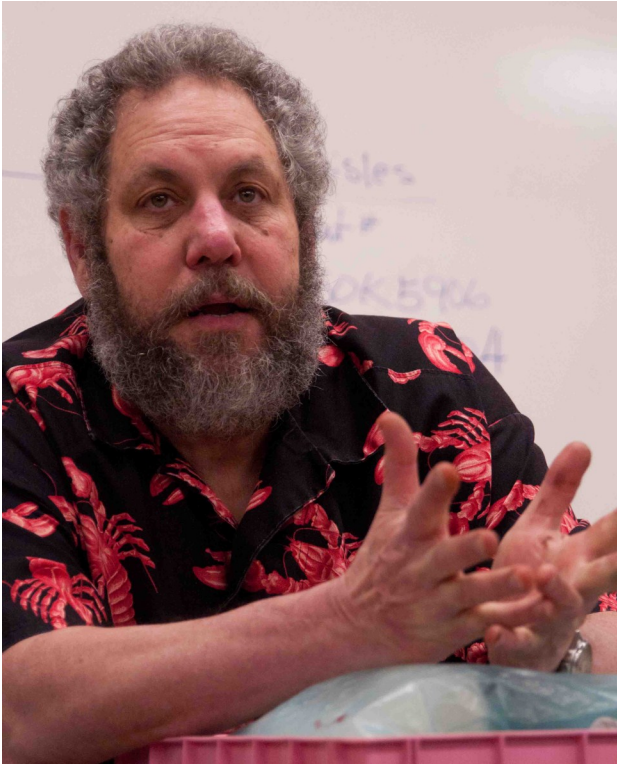

—Ed John, South Sioux City, Ne

Shop Tip (submitted by Herb Stoops)

DRILL BITS PROVIDE GREAT MEASUREMENT

When setting the distance from a router bit to the fence on your router table, a drill bit often can provide you with a more accurate measurement than any ruler in your shop. For example, when you need a $\frac{1}{4}$ " space, simply hold the shank of a $\frac{1}{4}$ " twist-type drill bit against the router bit, as shown at *right*, and move the fence in until the drill bit fits snug against both surfaces.

Don't, however, push the fence in so tight that you can't remove the drill bit. Rather, adjust the fence until the drill bit drags lightly on both the router bit and the fence when you withdraw it (much like using a spark-plug feeler gauge).

You also can employ this technique for setting the height of a router bit. Place a straightedge across the top of the bit, as shown at *right*, and adjust the height of the router bit until the drill bit fits snugly between the router base or tabletop and the straightedge.

President's Message

— by Bob Schaefer

The April 28 meeting was truly outstanding. Michael Dresdner put on a most informative question and answer program responding to numerous questions with wit, humor and, most importantly, great depth and breadth of knowledge of wood finishing. He also demonstrated many examples of different types of finishes on different woods plus additional items to illustrate the points he was making. A truly memorable presentation by a master in the field.

Short business notes. Three thousand dollars in the treasury and eighty eight paid members.

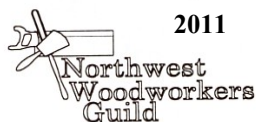

The next meeting is May 26 at 6:30 PM at Woodcraft Supply. The speaker will be John Shrader who will talk about doing metal inlay in wood. I have spoken with Mr. Shrader and visited his website (crestcreations.net) and I am sure this will also be a fine program. Be sure to check out the website.

Thanks again to Don McNutt and George Knutson for their able assistance, and to Ray Ross for bringing the goodies. And again much gratitude to Ron Hall for letting the Guild have its meetings in this great venue.

We will also have a Raffle and Show-and-tell at the next meeting! Be sure to bring your recent projects to share, and your \$\$ to purchase raffle tickets.
